Teaching Experience

Capital Reading

Teaching Assistant, with Prof. Ge Yang, at NJU

Autumn 2020

Macro Economics

Spring 2017

Teaching Assistant, with Prof. Lee, at Hohai University

Statement

I'm expected to receive my Econ PhD from Nanjing University in June 2024. My academic performance is excellent and I kept winning academic scholarships for many years. I naturally love exploring the world and doing research. I have a wide vision and my research interests focus on China economic issues, recessions and macroeconomics. I have already published a few dissertations for now as I list out in my resume.

I'm very skilled at economic analysis, data science. More importantly, I get the ability to think independently, which enables me to analyze and think more deeply about the nature of problems.

I have an optimistic and strong personality. I trust that my ability comes from long-term concentration and effort. For me the progress of science and technology is what make true value for human beings and I always think tomorrow will be better. I truly insist that what defines a person depends on his contribution to the world. I always follow the principle of being honesty and make everything open when I work, which makes communication simple and effective. I love to stay outside and embrace nature. Running, camping and swimming are my lifetime hobbies which make me energetic.

I'm ambitious and determined to be extraordinary. I know what it takes and I'll embrace it with great passion. I look forward to showing myself to you face to face.

Language

Native Chinese (Mandarin & Cantonese)

Fluent English
